

Map, Terrain, And River

Terrain	Hexes	Role
Grasslands	75	Default open ground
Water / River	21	River / water barrier
Woodland	6	Forests / wooded terrain
Mountains	6	Mountain terrain
Heaths	6	Heath / wild scrubland
Arable Land	6	Fields / cultivated land
Ruins	6	Old stones / ruins

Water/River hexes: D1, D2, E3, F3, E4, G4, H4, E5, I5, J5, E6, K6, L6, E7, L7, E8, F8, M8, N8, G9, H9. Every Water/River hex is a legal potential Bridge placement site. Bridge Candidate markers are optional review/test annotations only, not placement restrictions.

- Use flat-top hex adjacency only.
- No tile may be placed on a River/Water hex unless the tile explicitly permits Water/River placement.
- Bridge is the normal tile placed on a Water/River hex and is a Travel Tile.
- Placed, non-Overstrained tiles adjacent to a Bridge connect through that Bridge, including across the river.
- An Overstrained Bridge loses Travel connectivity.
- Crossing the river without a Bridge connection costs 1 Action.

Tiles And The Settlement Network

Place A Tile

1. Choose an available tile.
2. Choose a legal empty footprint on the map.
3. Pay the tile's resource cost from the shared Warehouse.
4. Spend the Place action cost.
5. If the placement is disconnected from the player's travel access, spend the disconnected Travel action cost unless a rule waives it.
6. Place the tile, reduce its stock, and move the acting player's Steward marker to that tile.

A tile must obey its printed terrain and adjacency restrictions. Multihex tiles must keep their full footprint on legal empty hexes. Single-hex tiles do not require rotation.

Connected Settlement Network

All placed, non-Overstrained tiles create the connected settlement network when connected by side adjacency. Travel Tiles remain a tile category and component identity, but they are no longer the only tiles that carry reachability. Active Bridges and eligible Docks connect networks according to their printed rules.
